CANADA, DEPARTMENT OF TRANSPORT, METEOROLOGICAL BRANCH

MONTHLY WEATHER MAP
CANADA

APRIL 1958

General Summary of Weather Conditions

APRIL 1958

April weather was mild in most parts of Canada - almost all provinces reporting above normal mean temperatures for the month. The Yukon Territory also reported temperature excesses but on the Arctic Archipelago there were deficiencies ranging to eleven degrees.

The month was generally dry with the greatest deficiencies reported from the grain areas of the Prairie Provinces, southern Ontario and southern Quebec. On the other hand there were precipitation excesses in the Mackenzie River valley and along both Atlantic and Pacific coasts.

On the Island of Newfoundland the weather continued mild throughout April. There were no real cold spells although temperatures were low on the 27th in most parts of the Island. The warmest day of the month was on the 25th when temperatures soared into the sixties. Mean temperatures for the month were two degrees above normal along the west coast and five or six degrees above normal throughout the remainder of the Island. There were no major storms on the Island during April, although Gander reported six inches of snow on the 5th. Snowfall was below normal because of the high temperatures. Total precipitation was 20 per cent below normal on the southeast corner of the Avalon Peninsula and at St. Anthony at the extreme northern end of the Island, but elsewhere there were excesses ranging to 50 per cent. St. Andrews was exceptional with twice the normal fall.

April was mild along the Labrador Coast, mean temperatures for the month ranging to four degrees above normal but averaging about two degrees above normal. There were small precipitation excesses along the coast, but Goose Bay reported two and a half times the normal amount for the month.

April weather was mild and dull in the Maritime Provinces with April mean temperatures ranging from three to five degrees above normal throughout the area. The warmest days were on the 15th and 16th when the temperatures reached the sixties in all parts of the Maritimes. A few days centred around the 22nd and 23rd were marked by very high minimum temperatures, the temperature failing to drop below 50 degrees throughout this period at almost all the Maritime stations.

A number of storms crossed the Maritime Provinces during April, one of which brought five to ten inches of snow to Nova Scotia and parts of southern New Brunswick on the 2nd. Scattered rainfall amounts of over an inch were recorded on the 18th and 22nd, but the heaviest fall was reported on the 29th and 30th at St.John where there was a two-day total of 4.29 inches. Precipitation totals for the month were 20 to 70 per cent above normal in Nova Scotia and the southern part of New Brunswick. There were smaller excesses in the remainder of New Brunswick while on Prince Edward Island there were deficiencies ranging to 30 per cent.

April was mild in the Province of Quebec. A particularly warm stretch of weather occurred around the middle of the month when temperatures rose into the seventies in the southern sections of the Province, and into the mid-sixties farther north. New record maximum temperatures for the date were established at a number of southern stations on the 15th and again on the 18th. Mean temperatures for the month averaged three to five degrees above normal in all the southern sections, four to six degrees in central Quebec, and near normal in the northern portions of the province.

April precipitation was very irregularly distributed over the Province of Quebec. In the southern sections there were generally deficiencies ranging to 40 per cent, except that on the Gaspe Peninsula scattered stations reported excesses and at least one station reported twice the normal amount. In the Lake St. John area there were both excesses and deficiencies, with the average near normal. In the central and northern sections of the province precipitation ranged from 40 per cent below to 40 per cent above normal.

April temperatures fluctuated widely in the Province of Ontario. Both the beginning and end of the month were cool, and the coldest weather came with a sharp Arctic outbreak on the 7th and 8th when temperatures dropped to near zero in northern Ontario and to more than ten degrees below freezing in southern Ontario. During the third week, temperatures frequently rose above 70 degrees at southern Ontario stations. Mean temperatures for the month were three to five degrees above normal in southern Ontario, and four to eight degrees above normal in northern Ontario.

There was little snowfall in Ontario in April. In the southern portion of the province most of the month's snow occurred in a storm on the 6th when falls of two to six inches were reported over an arc extending from London to Ottawa. Apart from this, precipitation was light in southern Ontario, deficiencies ranging from 20 to 80 per cent. In northern Ontario there were precipitation excesses ranging to 50 per cent in an area east of Lake Nipigon and north of Lake Superior, and a few stations in Patricia district reported twice the normal fall. The remainder of northern Ontario stations reported deficiencies ranging to 60 per cent.

The first three weeks of April were warm in Manitoba, and on the 13th and 14th new record highs for the dates were reported at many stations. Near the end of the month a surge of cold arctic air swept over the province to set new record lows for the date on the 28th and 29th. For the month as a whole temperatures averaged three to six degrees above normal over most of the province, and one or two degrees above normal in the northeastern quarter.

Blizzard conditions prevailed in southern Manitoba on the 28th and 29th of the month, when from one to five inches of snow were reported from most stations. Despite this storm, precipitation was deficient for the month in the southern part of the Province, deficiencies ranging to 80 per cent. In the northern part of Manitoba there were generally precipitation excesses of about 50 per cent although Brochet reported a 30 per cent deficiency.

In the provinces of Alberta and Saskatchewan April began with dull damp weather. A heat wave from April 11th to the 13th brought temperatures to 70 or above at most stations in the two provinces. This was followed by a series of Pacific disturbances which brought cooler weather and strong winds from the 15th to the 19th. During the last week of the month an Arctic outbreak brought the coldest temperatures of the month on April 27th and 28th, and on the 28th a number of stations reported new record lows for the date. Mean temperatures for the month were two to six degrees above normal in Saskatchewan, normal to two degrees below normal in the southern half of Alberta, and two to six degrees above normal in the Peace River District.

April precipitation was irregularly distributed throughout the provinces of Alberta and Saskatchewan. In the Saskatoon-Prince Albert region, there were generally excesses, Prince Albert reporting twice the normal amount with greater excesses further down the Saskatchewan River. April precipitation totals were two or three times normal in the southern foothills of Alberta. Elsewhere in the two provinces there were deficiencies ranging to 80 per cent with one station receiving no precipitation at all.

During the first three weeks of April low pressure in the Gulf of Alaska produced a flow of moist Pacific air across the Province of British Columbia and temperatures remained close to the seasonal values. Temperatures were a little higher in the last week of the month as a high pressure area centred over the region. For the month as a whole, temperatures were within a degree of normal on Vancouver Island and in the Fraser River delta, normal to two degrees below normal in the southern interior valleys, three to four degrees above normal on the Queen Charlotte Islands, and four to six degrees above normal in the central and northern interior of the Province.

The flow of moist air across southern British Columbia reached its peak during the third week and precipitation was heaviest at this time. On the southern part of Vancouver Island and in the southern interior valleys of British Columbia April precipitation ranged from normal to twice normal. On the northern half of Vancouver Island there were deficiencies ranging to 20 per cent, while in the Queen Charlotte Islands and along the northern section of the British Columbia coast deficiencies ranged to 40 per cent. The distribution of precipitation was very irregular in the central and northern interior of the Province, the range being from 50 per cent below normal to 60 per cent above.

In the Yukon Territory, April was mild, mean temperatures for the month ranging from six to eight degrees above normal. Precipitation was twice normal at Snag and 70 per cent above normal at Whitehorse, but all other Yukon stations reported deficiencies averaging 70 per cent.

Mean temperatures were two to six degrees above normal in the Mackenzie River valley, and three to eight degrees above normal on the shores of Great Slave Lake. Elsewhere on the mainland part of the Northwest Territories there were deficiencies ranging to eight degrees. April was cold on the islands of the Arctic Archipelago where deficiencies of mean temperatures ranged to eleven degrees.

April precipitation was heavy in the District of Mackenzie with amounts ranging to two or three times normal at a few stations. At Coppermine and Aklavik there were deficiencies of 15 to 20 per cent. In the District of Keewatin the range was from deficiencies of 80 per cent to excesses of 70 per cent with the average slightly below normal for the Territory as a whole. Frobisher reported three and a half times the normal precipitation for the month and Cambridge Bay experienced a small excess, but all other stations on the Arctic Archipelago experienced deficiencies ranging to 90 per cent.

APRIL 1958
TEMPERATURE, PRECIPITATION AND SUNSHINE

The temperatures for the month are given in degrees Fahrenheit in the temperature columns under the following headings:
MAX. The highest temperature.
MIN. The lowest temperature.
MEAN The mean temperature for the month.
The remaining columns give the following information:
PRECIP. The total precipitation in inches for the month including the rainfall and the water equivalent of the snowfall.
SUN The total hours of bright sunshine for the month.
SNOW ON GRND. The depth of snow in inches lying on the ground at the end of the month (when reported).
The use of (A) following the station name indicates that the meteorological observations are taken at Airport offices and (R) indicates that the observations are taken at Radio Range Stations not at Airports.
